# Executive Summary

---

## Overview and Purpose

Callan's *2021 Investment Management Fee Study*, our ninth examination of what institutional investors pay for asset management, provides a detailed analysis on fee levels and trends across multiple asset classes and mandate sizes, for both active and passive management.

The analysis gives insight into what our institutional investor clients are actually paying (negotiated fees) versus the managers' published fee schedules.

---

## Features

**Actual vs. Published Fee Analysis:** Compares by mandate size ranges the published fees of the broad product universe, published fees for just those products with client mandates, and the actual fees being paid for those client mandates.

**Vintage Analysis:** Compares current actual fees for more recently incepted mandates (2016 and after) with those of older mandates (2015 and before) to better measure fee trends over the long term.

**Concentration Analysis:** Examines the concentration of AUM, mandates, and actual fees/revenues by investment firm for each asset class.

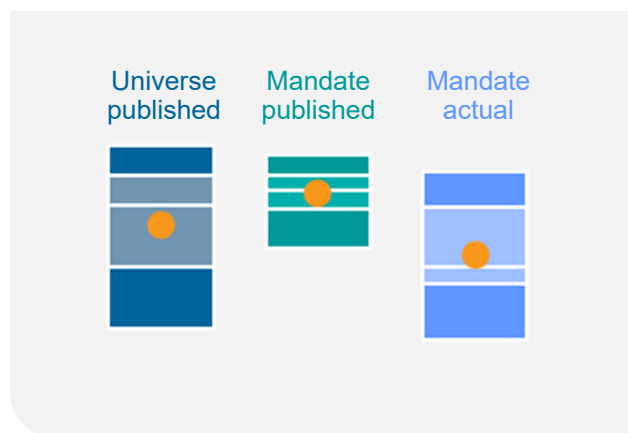

**Asset Classes:** Covers a total of 21 different asset classes.

**Vehicles:** Covers many institutional mandate vehicle types including separate accounts, many types of commingled funds (including collective investment trusts), and various partnership types. Mutual funds are excluded from this study.

**Fee Data:** In addition to fees paid in basis points, we capture the average discount from the published fee schedules. We also analyze average mandate sizes and average fees paid in dollars to gain insights into the health of the industry.

# Data and Methodology

## Data Sources and Types

The detailed data supporting this report were collected and curated using Callan’s proprietary investment manager database, actual client fee schedules, and Callan’s proprietary client performance reporting database.

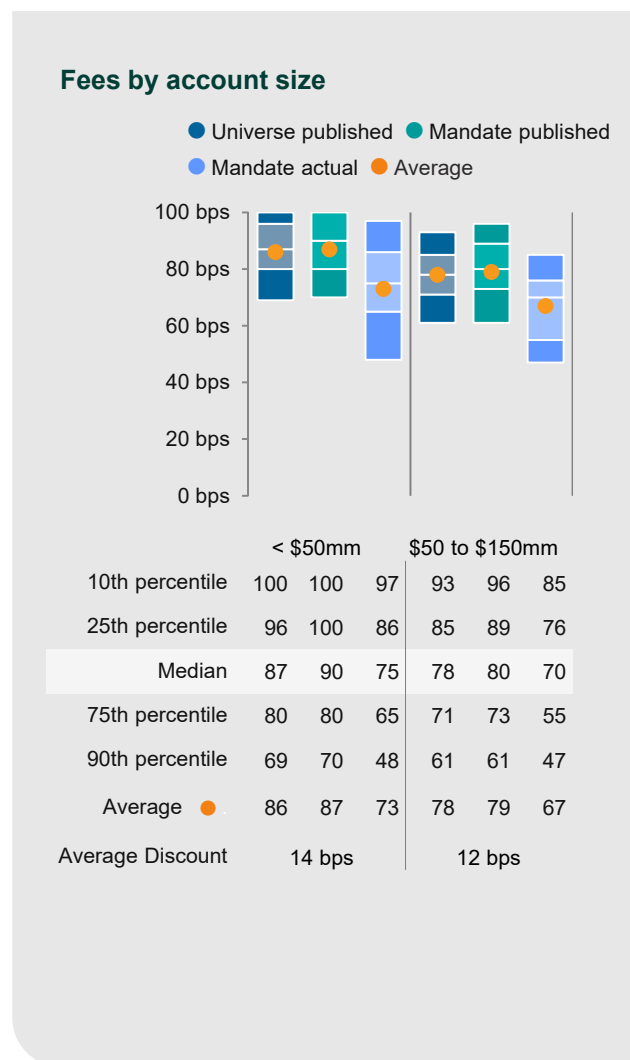

The actual fee dataset for each client mandate was derived from client fee schedules and our client performance reporting database and represents fees paid for 2020. The resulting raw dataset was then reviewed for completeness and accuracy. The final clean dataset was then categorized by parameters such as active/passive, asset class, account size, inception date, and investment manager product. Unique mandate size ranges for analyzing each asset class were determined, balancing practical relevance with sufficient sample sizes. Throughout the study these actual client fees are labeled as “*mandate actual*” data.

All published investment product fees come from Callan’s database of investment manager products. By cross-referencing the manager products and mandate sizes in the *actual* fee dataset with the “published” or “standard” fee schedules for those products, we calculated the theoretical published fee (non-negotiated) for those same mandates. These theoretical client fees are labeled as “*mandate published*” data. This more focused view of published fees is very useful as it represents the starting fee ranges for successfully competitive products, as well as helping crystallize actual negotiated discounts when compared to actual fees (mandate published - mandate actual).

In order to provide a broader view of the competitive fee landscape we also include the range of published fees for all products in the relevant asset class universe (regardless of having any client mandates). This range of published fees is labeled as “*universe published*”. Comparing this broader universe of published fees with the successful mandate published fees can be useful in determining what levels of published fees are competitive.

# Data and Methodology

## Actual vs. Published Fee Analysis

This analysis done on each asset class is meant to show current industry fees from three perspectives: 1) standard “published” fees from the broad universe of all competing products, 2) published fees (pre-negotiation) for only the subset of those products that have Callan client mandates, and 3) actual fees paid (after negotiation) for those client mandates. The goal is to illustrate and compare the fees for the total competitive landscape, the fees for those products successfully winning mandates from Callan clients, and the actual fees those clients ended up paying in 2020.

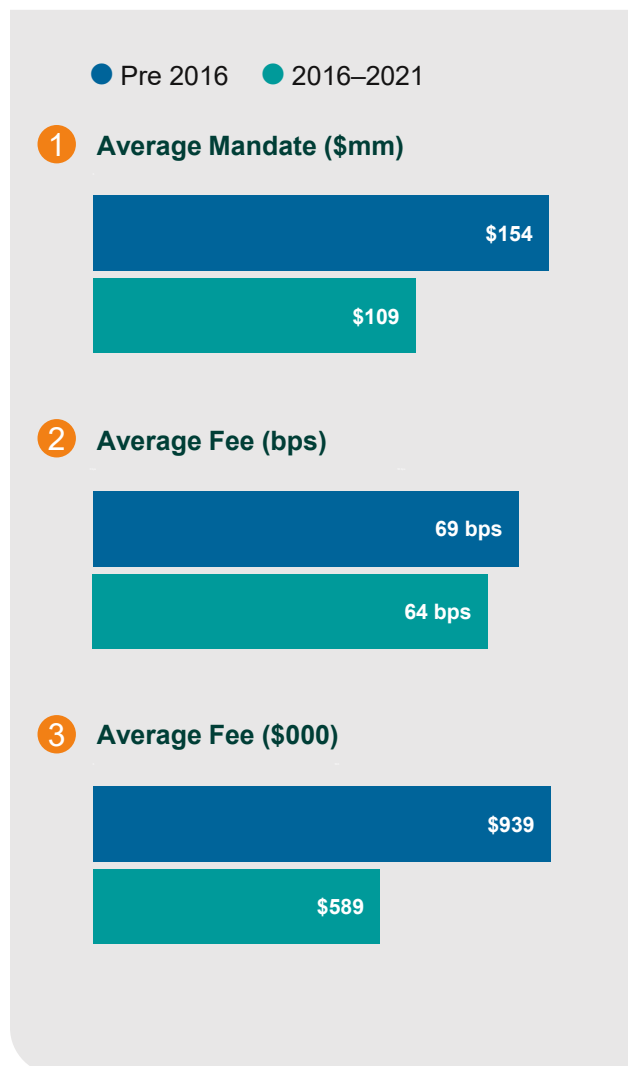

The analysis groups the mandates by asset size and so illustrates the change in effective fees as mandate size grows. In selecting the size ranges for each asset class, we took into account available sample sizes of client mandates, the usefulness of the breakpoints, and the number of ranges. In asset classes where sample sizes were too small we only report on the total asset class.

For each mandate size range there are three distributions shown: *universe published*, *mandate published*, and *mandate actual* respectively (see chart to left). These three distributions can differ significantly. The reasons for differences between *universe published* and *mandate published* can include: 1) client-specific fee criteria for the search (getting screened out on fees before having the chance to negotiate), 2) hiring tendencies of clients (e.g., choosing lower fee products vs. good performers), 3) differences in actual and published fee database participants, 4) institutional demand and product availability. The reasons for differences between *mandate published* and *mandate actual* can include: 1) negotiation of an actual fee below the published fee schedule as part of the hiring process, 2) relationship pricing when a client uses multiple manager products, 3) stale published fee schedules, 4) client tendencies to periodically renegotiate fees on existing mandates.

The Average Discount is also shown for each mandate size range. It is the difference between the average mandate published fee and the average mandate actual fee.

# Data and Methodology

## Vintage Fee Analysis

The Vintage Fee Analysis dives deeper into actual client mandate fees to illustrate the changes in the fee environment over the long term (>20 years). In order to better display these changes in investment management economics, the analysis focuses on not just changes in average actual fees in basis points (% of AUM), but also changes in average mandate sizes and the resulting changes in average dollar fees per client mandate. Looking at fees in both basis points and actual dollars per client gives a clearer picture of how sustained downward pressure on both fee schedules and mandate sizes results in significantly lower dollar fees paid (manager revenue) per client. Showing results in dollars is more illuminating in cases where the average fee in basis points appears stable, but the average mandate size declines materially, resulting in a lower average dollar fee.

The Vintage Fee Analysis looks only at current actual client fees, and groups client mandates into two vintages by mandate inception (hiring) date: 1) older pre-2016 inceptions, and 2) newer 2016 and after. The vintage groups are further broken down into mandate size ranges. For each vintage and mandate size group we calculate:

- 1 average mandate size in dollars
- 2 weighted average fee in basis points, and
- 3 average fee per mandate (client) in dollars.

Although we use inception vintage groups to differentiate industry fee dynamics over time based on when a mandate fee was negotiated, it is important to note that the **fees being used are the current fees, not necessarily what they were at inception** (original fees are not reliably available). Since some clients do periodically renegotiate fees with their managers, it is likely that some of the mandates in the older vintage had higher fees at inception. This means our analysis probably understates fees in the earlier vintage and therefore also understates the downward change in fees since 2016.

# Data and Methodology

## Concentration Analysis

**\$34.5 billion** in assets and **\$206.9 million** in fees

**240** mandates with **90** different firms

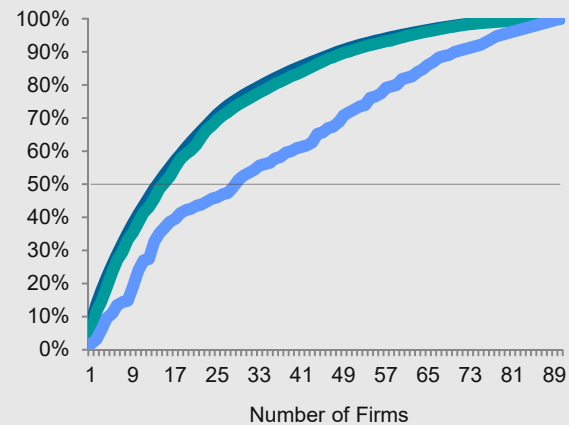

- ▶ 50% of assets managed by 14 firms (16%)
- ▶ 50% of fees made by 15 firms (17%)
- ▶ 50% of mandates run by 29 firms (32%)

**Active** management has **73% AUM** market share in this segment (27% AUM passive)

**Active** management has **98%** fee market share in this segment (2% fees passive)

### Concentration by Firm

● % Total AUM ● % Total Fees ● % Total Mandates

Concentration Analysis is done on the actual client fee dataset both at an industry level (active and passive) as well as asset class by asset class to provide insights into how the competitive pie is being allocated across investment firms by our clients. The results illustrate the number of mandates in each area as well as how many different firms manage those mandates. Concentration of market share in each area with respect to percent of mandates, percent of total AUM, and percent of total fees is highlighted by showing how many firms control at least 50% of each. Where relevant we also determine the market share of active vs. passive in an asset class.

We are tracking the investment manager for every client mandate in the fee database, along with the mandate AUM and fee (in basis points and dollars). Therefore we can group mandates by investment management firm and generate useful results on manager market share and concentration across our clients in each asset class and in total.

## Key Findings

Callan's 2021 *Investment Management Fee Study* reflects trends on 2020 fees representing \$598 billion in assets under management and \$1.4 billion in total fees paid. Our fee database includes mandates run by over 300 investment firms for over 160 institutional investors.

### Fee resilience strongest for:

Private Real Assets  
Global ex-U.S. Equity  
Global ex-U.S. Small Cap Equity

### Total \$ Fees down most:

U.S. Large Cap Equity  
Hedge Fund-of-Funds

### Increased Passive Usage in:

**U.S. Smid/Small/Micro Cap Equity**  
(now 27%, +10% from 2019 study)

**U.S. Large Cap Equity** (now 69%, +8% from 2019)

**Core Fixed Income** (now 48%, +4% from 2019)

### Popular Vehicles

Separate account	62%
CIT	17%
Commingled	12%

### Highest Fees

Hedge Fund-of-Funds	117 bps
Private Real Assets	84 bps
Global ex-U.S./Global Small Cap	71 bps
U.S. Smid/Small/Micro	67 bps
Emerging/Frontier	64 bps

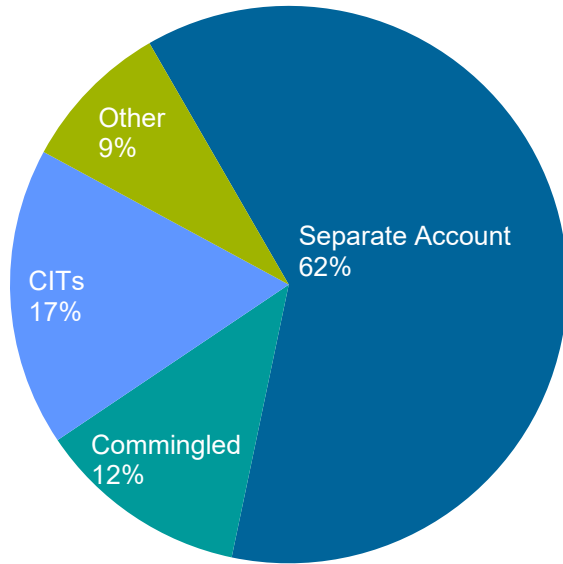

### Lowest Fees

Passive U.S. Large Cap	2 bps
Passive Core Fixed Income	3 bps

# Fee Database Profile

## Investment Products by Vehicle Type

> **300** distinct investment firms

> **\$597.7 billion** total assets under management

> **\$1.4 billion** total fees paid in 2020

> **160** distinct asset owners represented

Vehicles	Count	AUM (\$mm)	Average AUM (\$mm)
Separate Account	1,053	\$473,952	\$450
Commingled	210	\$53,295	\$254
CITs	296	\$52,355	\$177

## Authors and Contributors

**Shane Blanton** is an assistant vice president in Callan's Published Research Group covering business analytics. He is responsible for data analysis and visualization to support Callan's research endeavors. Previously Shane was a member of the Analytical Solutions group for three years, training Callan's clients to use PEP software.

**Ivan "Butch" Cliff, CFA**, is an executive vice president and director of research, responsible for the Global Manager Research and Capital Markets Research groups. Butch is the chair of Callan's Alternatives Review Committee, and a member of the Management, Client Policy Review, Institute Advisory, and Editorial committees. He is also a portfolio manager and member of the investment committee that oversees all of Callan's discretionary multi-manager solutions. He is a shareholder of the firm.

Butch is a holder of the right to use the Chartered Financial Analyst® designation.

**Jacki P. Hoagland** is an assistant vice president in Callan's Published Research Group. She is responsible for assisting in the graphic design of all Callan publications, marketing materials, and newsletters. Jacki also works with all three of Callan's lines of business to provide assistance with prospect and client documentation, special projects, and presentation materials. She is a shareholder of the firm.

**Matt Loster** is a vice president and the manager of Callan's Measurement Development group. In addition to the day-to-day operations of the group, Matt develops and maintains performance measurement-related quantitative and qualitative analytics. He also manages the equity index calculation for client portfolio attribution, ongoing data processing from vendors, and ad-hoc research projects. He is a shareholder of the firm.

**Alpay Soyoguz, CFA**, is a senior vice president in Callan's Measurement Development group. He is responsible for implementing performance measurement operations, as well as the development and maintenance of Callan's databases and peer universes. Alpay is a shareholder of the firm.

Alpay is a holder of the right to use the Chartered Financial Analyst® designation.
